This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 824273.

Workshop Objectives

- Identifying patterns of big data applications in the transport industry
- Understanding how companies can leverage big data to detect and capture emerging business opportunities
- Exploring the potential of environmentally sustainable business model in the transport industry
- Exploring how big data facilitates or hinders the development of greener products/services

Survey Results

In which of the following activities does your company apply big data (17 Respondents in total)

Transition Toward A More Environmentally Sustainable Business Model

Companies typically do this by maximising material and energy efficiency, creating value from waste, substituting with renewables and natural processes, delivering functionality rather than ownership, encouraging sufficiency, and re-purposing the business for society and the environment.

(How) can big data be used to help you with this transition?

Thank you for your participation
